

# LineStar LS15

Striping machine for synthetic sports surfaces and artificial turf.  
Compressor, petrol engine

Striping and marking of sports surfaces require special accuracy and therefore high precision during application. In the majority of cases, national and international standards must be complied with. The concept and function of the LineStar LS15 are optimised to meet these strict requirements. When used with professional expertise, this striping machine is capable of achieving the highest standard.

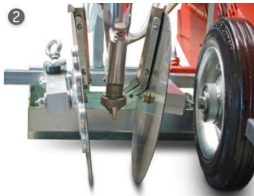

Its powerful drive motor coupled to the compressor generates the compressed air required to power all functions. The pressure container for the line marking paint delivers the required quantity directly to the precision spray gun. All adjustments necessary for precise application of the paint can be made there.

With the help of LS15, line widths of 4 to 15 cm can be produced with line-marking paints, exactly as required. All functions for handling the machine are arranged at the machine steering handlebar and are very easy to control. It is very easy to use and therefore significantly reduces the work load of the operator.

On athletics tracks, smooth running is ensured through solid-rubber tires with precision bearings. To provide exact guidance for striping on artificial turf, an optional star wheel can be supplied.

Pneumatic control of all functions, clearly arranged

Striping unit with limiter discs, line width adjustable

Compact SMG transport crate with fixing points

Technical information:

Motor output:	3.5 kW (4.7 HP) at 3.000 rpm
Compressor output:	max. 360 l/min
Weight:	120 kg
Dimensions:	L 1.100 x B 600 x H 900 mm
Transport box:	L 1.150 x B 700 x H 1.150 mm
Transport weight:	150 kg
